

TECHNICAL FEATURES

SPEEDLINGUA PROFESSIONAL NETWORK

Version 2.0

Configuration required for version 2.0

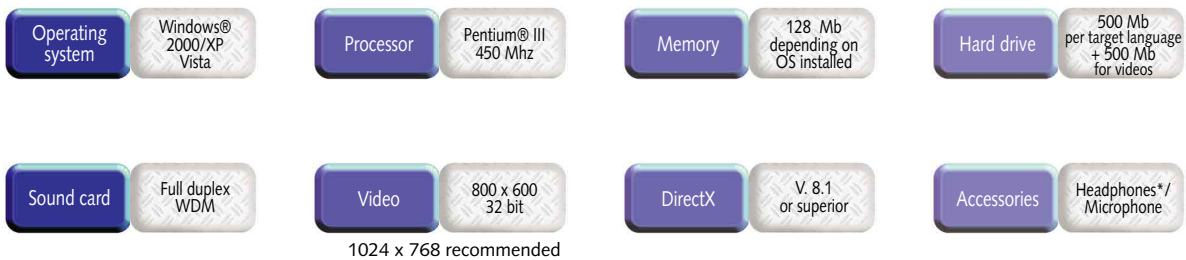

Speedlingua Professional Network is a multi-workstation software for language training centres and schools, as well as companies with a networked, multimedia resource centre. Speedlingua is PC compatible and runs on Windows. It comes with two applications: one for the user and the other for administration.

Global technical features:

The exchange of data within the **Speedlingua Professional Network** system is mainly through file sharing. Computers with both user and administration applications installed must have read and write access to the main shared frame. **It is essential to have 500 Mb of free disc space per target language, 500 Mb for videos and 2 Mb per user for storing history files.**

1. THE USER APPLICATION

Required configuration:

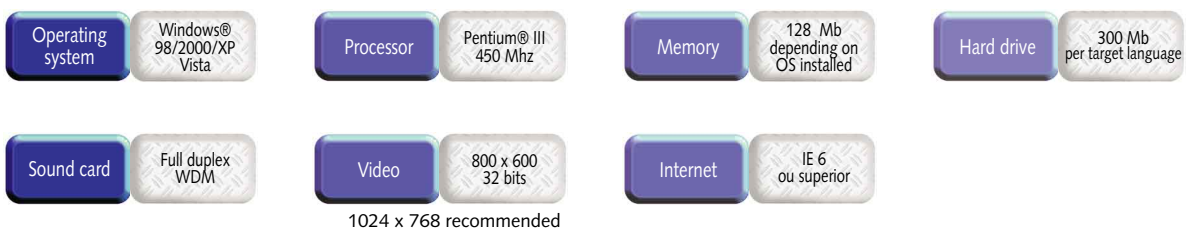

*USB/DSP headset recommended

2. THE ADMINISTRATION APPLICATION

Core functions:

- Creation, suppression and modification of users and groups
- Authorization of profile creation from the user application
- Setting of user ID, password and target language for each user
- Printing of follow-up documents for each user and group
- Access to user and group history files
- Access to the pronunciation tests of each user
- Activation and disconnection of workstation

REQUIRED CONFIGURATION:

The hardware and network features must meet or be superior to these requirements.
